GRADING OF DAIRY PRODUCE IN CANADA

By

J. A. RUDDICK, LL.D.

DAIRY AND COLD STORAGE COMMISSIONER

DOMINION OF CANADA

DEPARTMENT OF AGRICULTURE

BULLETIN No. 67-NEW SERIES

PRINCIPAL SERVICES ASSIGNED TO THE DAIRY AND COLD STORAGE BRANCH

(1) Grading of Dairy Produce; (2) Scientific Research in Dairying; (3) Study of World's Conditions in Dairying; (4) Correspondence and Advice on all Matters relating to Dairying; (5) Inspection of Prerishable Cargoes at Canadian and United Kingdom Ports; (6) Refrigerator Car Inspection; (7) Dairy Market Intelligence; (8) Promoting Uniformity in Dairy Manufactures; (9) Judging Butter and Cheese at Exhibitions; (10) Administration of the Cold Storage Act and Creamery Cold Storage Bonuses; (11) Enforcement of Dairy Laws, and (12) the Utilization of Milk and Its Products.

THE GRADING OF DAIRY PRODUCE IN CANADA

THE DEVELOPMENT OF GRADING

ALBERTA

Some preliminary work in the scoring and inspection of butter was carried out by the Federal Dairy Branch at the Government Cold Storage at Calgary, Alberta, before the supervision of the so-called "Government" creameries was turned over to the newly-created provincial Department of Agriculture in 1906. This work was continued and enlarged by the Alberta Department of Agriculture under Dr. C. Marker until in 1910 definite standards were established for 1st and 2nd grade butter. Grading was limited to the Government operated creameries until 1912, when the offer was made to grade all butter manufactured in the province. In 1913 a "Special" grade was established. In 1914 the work was further systematized under ministerial authority and grade certificates were issued.

SASKATCHEWAN

In Saskatchewan the first attempt at butter grading was made in 1912. The Dairy Commissioner for Saskatchewan has supplied the following note on the subject:—

The grading of butter (in Saskatchewan) commenced in a rather primitive method during the year 1912. The original system was inaugurated with the object of checking the quality of butter at each plant operated by the Co-operative Creameries under Government supervision. A one-pound print of each churning was retained in the refrigerator at the creamery throughout the six month summer season. At the end of the season these prints were all scored. It was rather a severe test for the first of the prints had been kept in an ordinary refrigerator for six months. This was again carried out in 1913. The following year, 1914, the first regular grading of butter for the markets was inaugurated. During this season each creamery was allotted a letter of identification. This letter and the churning number was stamped on every box of butter packed. A 14-pound box was packed from each churning and shipped by first express to Regina. Once a week each creamery shipped all butter on hand to a central point and the grading on the 14-pound boxes was checked on the commercial package. After the second scoring which was made on the 56-pound boxes an official grade certificate was issued. The above service was extended to embrace the whole creamery industry of the province. It is significant that during the first four years, while the 14-pound box was in use for educational scoring, grade certificates were only issued after an examination of a commercial package. In 1918 the first official grade certificates were issued on churnings represented only by a 14-pound sample box.

MANITOBA

The Dairy Commissioner for Manitoba has supplied the following note:-

The Manitoba Department of Agriculture introduced the grading of creamery butter in April, 1914. There was no legislation enacted or no regulation making grading compulsory. The Government appointed L. A. Gibson to the position of first Dairy Produce Grader. His services were placed at the disposal of the dairy industry to score the creamery butter and to advise the manufacturers of defects existing in Manitoba butter.

The objects of scoring and grading were primarily, educational, and, from the standpoint of the Government, instruction through scoring was the purpose of establishing a butter grading service which really supplemented the work of the Dairy Department of the Agricultural College, and the dairy instructors in the field. Grading, then, was chiefly concerned with instruction and a very detailed score was supplied to the creamery on each churning examined by the Dairy Produce Grader.

ONTARIO

A voluntary system of grading butter for educational purposes was started by the Ontario Department of Agriculture in the spring of 1917, and is still in operation. Creameries wishing to take advantage of this service send 14-pound samples to the grading station at Toronto.

NEW BRUNSWICK

In 1917 some preliminary work in cheese grading was done by the New Brunswick Department of Agriculture. In 1918 the grading of cheese in that province was made general. The objects were both educational and commercial, the local buyers agreeing not to puchase ungraded cheese. The cheese was then, and still is, disposed of in local markets.

QUEBEC

The first purely commercial grading of butter and cheese in Canada for export was carried out at Montreal by the "Société Co-opérative Agricole des Fromagers de Québec" (Agricultural Co-operative Society of the Cheese-makers of Quebec). This society began selling cheese by auction after it was graded by provincial officials, in the beginning of the season of 1910. In 1911, the grading and sale of butter was added to the society's activities. The name of the society was afterwards changed to that of the "Co-opérative Fédéreé Québec," (Federated Co-operative of Quebec) and it is still doing a large business.

Thus these various voluntary services, based on ministerial authority only, beginning under the direction of this branch at Calgary and carried out by Dr. C. Marker, then a member of the staff, and extended under the different provincial auspices, paved the way for a general system of official grading for export under federal authority.

FEDERAL GRADING OF DAIRY PRODUCE

With the knowledge of what was being done in some other countries in the way of grading dairy produce for export, the question began to be discussed in Canada as early as twenty years ago, but the time was not ripe and the producers were not in the mood to accept the restrictions or conditions that a grading system would impose. At that time, Canada had practically no competition in the export trade in cheese, and the need for improvement in quality in so far as the sale of cheese was concerned, was not as keenly felt as it came to be in later years. At the same time, the exports of butter had fallen to negligible quantities and the demands of the local or home market were such that even butter of indifferent quality could command full price.

It was not until the dairy produce trade began to resume a normal condition after the war, and it was suddenly realized that Canada was face to face with competion of a formidable character, that the question of grading began to receive serious attention. The prospects of a growing surplus of butter for export also became a factor in the case and it was felt that unless some vigorous action was taken, Canada was in great danger of losing her position in the cheese markets of the world and would have difficulty in gaining a reasonable position with butter.

During the seasons of 1920 and 1921 a Dominion official was stationed at Montreal to grade cheese for sale at auction by the United Dairymen Cooperative, an Ontario organization. The work was continued in 1922 and was extended to a number of exporting firms who wished to take advantage of the service in connection with the cheese and butter which they were handling.

At a conference of provincial deputy ministers of agriculture with officials of the Dominion Department of Agriculture, held at Ottawa, March 17-19, 1920, there was a discussion on the subject of grading dairy produce and it was agreed that grading for export was a federal function. A resolution was passed recommending the Dominion department to put into effect as soon as possible a compulsory system of grading all dairy products intended for export. During the session of the Dominion Parliament in the same year, a resolution was introduced in the House of Commons, calling upon the Department of Agriculture to establish a grading system. There was a free discussion and general support of the resolution by the members.

The department recognized, in the acceptance of the principle of grading by Parliament, a mandate on the subject and proceeded to lay plans for putting the principle into practice.

A Dominion-wide conference of delegates from various branches of the industry and dairy organizations throughout Canada was held at Ottawa on March 7 and 8, 1922, to discuss definitions, standards and grades. After a full discussion on the subject, the standards and definitions for the different grades of butter and cheese now in force, with slight amendments, were finally adopted.

THE (DOMINION) DAIRY PRODUCE ACT

The Dairy Produce Act and Regulations, the statutory authority under which the federal grading of all dairy produce for export is now carried out, became effective on April 1, 1923. Since that date all butter and cheese exported, and practically all the cheese and much of the butter consumed in Canada, has been graded. Butter moulded or cut into prints or blocks is not graded under the Dairy Produce Act.

Marks to indicate the grade have been placed on all containers of butter

or cheese after grading, since the beginning of the season 1924.

Tables I and II give a summary of the gradings of cheese and butter in Canada, under the Dairy Produce Act, since April, 1923. Attention is directed to the marked improvement in the quality of the butter and cheese in 1925 as compared with 1923. For instance, the percentage of "Special" and "First Grade" cheese in all Canada increased from 78 per cent in 1923 to 85.9

per cent in 1925.

The quality of the butter in different years is not strictly comparable for the reason only about 25 per cent of the total creamery butter produced has been graded so far, and the outputs of the same creameries have not been graded in the different years, but it is a well established fact that there has been a very marked improvement in the quality of Canadian butter during the last three years and it is a reasonable assumption that part of this improvement should be credited to the grading.

Under the grading system superior quality secures a just reward, and poor

quality is penalized. That tells the whole story.

Tables III to XVIII give the percentage of special and first grades by factories of all butter and cheese graded in Canada in the years 1924 and 1925. The factories are listed by Registered Numbers only. In Ontario, Quebec and the Maritime Provinces, they are grouped by counties. Pasteurized and unpasteurized butter are classified separately.

Tables XIX to XXIII give the percentage of special and first grade butter and cheese by counties in 1924 and 1925. Table XXIV gives the results of

regrading butter.

In both years some of the factories selling cheese or butter in local markets had only a portion of their output graded. The percentages given in these cases may not be an accurate presentation of the average quality of all the cheese or butter produced in the factory.

Table XXIV.—Percentage Original Grading and Regrading of Pasteurized and Unpasteurized Butter, in 1924 and 1925

PASTEURIZED BUTTER

Year	Total Number	Per cent of First	Special and Grade	Per cent
1 Cai		Original Grading	Regrading	Decrease
1924	32,034 82,769	92·5 85·3	89·3 78·9	$\begin{array}{c} 3 \cdot 2 \\ 6 \cdot 4 \end{array}$

UNPASTEURIZED BUTTER

Year	Total Number		ent of Grade	Per cent
Tear	of Boxes	Original Grading	Regrading	Decrease
1924	21,035 17,287	81·9 78·2	66·7 68·6	15·2 9·6

Note.—The time the butter was held in storage varied from two to eight months and averaged about five months. A small proportion was regraded at expiration of time limit of certificates.

(From an address de'ivered at London, Ont., January 14, 1926).

PROGRESS IN GRADING

The principle of grading is now applied in the marketing of many farm products including grain, wool, meats, eggs, etc., as well as butter and cheese. The grading of most products in which such definite factors as weight and measurement are employed, is a comparatively simple matter compared with the grading of butter and cheese in which the elusive quality of flavour is the most important factor. The difficulties of the grading of dairy produce are further increased by the fact that the flavour of butter and cheese is liable to change, and does change in some samples, almost overnight, while in other products, the qualities on which the grades are based have a permanent character and the grading once properly done holds good almost indefinitely. Cheese and buttermakers should keep this point in mind when they feel inclined to complain of the grading of their products.

This possibility of difference between the factory and the warehouse or grading point, cannot be properly urged as a plea for grading at the factory or shipping point. As a matter of fact, it emphasizes the importance of designing the system so as to give the grader full opportunity of detecting unsound qualities of flavour in the article which he is examining. That is to say, the ideal arrangement would be to have the grading done only when it is reasonably sure that the permanent characteristics of the butter or cheese have been developed. Of course, there are two points of view in this matter. The owner of the butter or cheese naturally desires to have the grading done at the time or under the conditions when there is the best possible chance of undesirable qualities being undetected; in other words, he wants to have the butter and cheese graded when it has the best chance of receiving the high grade. That is the private or individual point of view.

The other, or public point of view is that the grading should be done at the time and under such conditions as will result in every possible and probable defect being detected or anticipated, so that when the butter or cheese is marketed, the grades will correspond with the actual quality and condition of the goods. If any large number of cases occur in which the grading does not correspond with the quality, the whole system falls to pieces and the benefits and advantages of the grading system are very largely lost. No one can quarrel with the owner in his desire to secure the highest possible grade regardless of consequences to the industry at large, but at the same time, there should be no quarrel with the other point of view which aims to protect the industry and make the grading a real service.

Looking back over the three years during which we have had official grading in Canada and, remembering the violent opposition from some factory operators and the export trade when the scheme was first proposed, we have reason to feel we have made considerable progress. When the grading was started, we were, in a manner, sailing an uncharted sea. We had no records or experience to guide us, but we are gradually evolving a system and building up a staff along lines which experience has proved to be satisfactory.

Grading is one of those services which is done by the Government as the only independent authority to undertake such work. Neither the Government nor its officials charged with the actual grading have any object or desire to inflict hardship or loss on producers by under-grading butter or cheese. The inclination is quite in the opposite direction because the grading staff like to make a good showing.

PUBLICATIONS ON DAIRYING

The following publications of the Department of Agriculture relating to Dairying are available on application to the Publications Branch, Department of Agriculture, Ottawa:—
